Setnayan — Data Privacy Summary

What we provide · What our website promises · How we comply

Prepared for the Data Protection Officer

Indalecio Sacdalan Casasola II

SETNAYAN SOFTWARE DEVELOPMENT SERVICE · DTI Business Name No. 8297508

22 October 2026

How this was made: every line was checked against the shipped code (`origin/main`, commit `aceb080a0a`, 22 Oct 2026) and the live legal pages in that code. Nothing was read from the production database. Where a feature only runs once a switch is on, this summary says so; whether each switch is on in production could not be checked.

Not legal advice. Republic Act No. 10173 (Data Privacy Act of 2012) is referred to as "RA 10173".

Part 1 — What we provide

Each service, the personal data it uses, why, and who else receives it. "Our storage" means Supabase (database, Singapore) and Cloudflare R2 (files, Asia-Pacific). Every service also runs on Vercel (hosting; functions in Singapore).

Service	Personal data it uses	Why	Shared with (outside Setnayan)
Sign-in and accounts	E-mail, password (hashed), name, optional phone and photo; optional birth date, religion, civil status, dietary needs (each with its own consent time); a hashed device code for fraud checks	To run the account	Our storage. **Google** or **Apple** if the person signs in with them (each behind a switch). Cloudflare Turnstile bot check on sign-up (when its key is set)
Events	Couple's names, event date, venue address and map pin, budget, ceremony type (shows religion), schedule, story	To plan the event	Our storage. **OpenStreetMap** gets the venue address (no name). **Google Gemini** gets mood-board pictures on a paid render
Guests	Names, mobile, address, photo, dietary needs, relation, table, RSVP, sponsor details, QR-scan records (IP cut short)	To run RSVP, seating, check-in	Our storage. Browser push service if the guest allows notifications. **Guests get no e-mail** (since 29 Sep 2026)
Event Hub (the event page guests open)	Names of the couple and cast, event details, schedule, chosen photos	To show the event to invited people	Our storage. Visibility is set by the host (private by default). A minor's details, religion, guest list, budget and chat are never public
Papic (event photos)	Photos and clips of people, who took them, phone model, location in the original file; consent choices; FaceBlock choice	To collect and deliver event photos	Our storage. **Google Drive** only if the couple connects it. Location is removed from every download and share
Face matching (inside Papic)	A selfie and a face code (vector), with consent time	To find a guest's own photos in one event	**No one.** Worked out in the guest's browser and our own server; stored in our database. Adults 18+ only. Erased 12 hours after the event
Live Watch and live video	The live video; the IP address between the two devices; YouTube connection details	To stream and to connect cameras and calls	**Google / YouTube** (the couple's channel or ours). **Cloudflare** relay and **Google / Cloudflare** address servers, in transit only. Calls are never recorded

Suppliers and shops	Business documents (DTI, BIR 2303 with TIN, Mayor's Permit, bank proof), portfolio, references, payout account, chat, reviews	To verify and list suppliers	Our storage. **Anthropic** for a supplier's own public business research and gallery screening. **Instagram** if the supplier connects it. No ID check company is used
Supplier photos (supplier Papic lane)	Photos and clips a booked supplier takes of its own work at the event	Supplier's own copy and portfolio	Our storage. A guest's takedown also removes the supplier's copy
Memories and People	Albums across events, connections (both people confirm), dependents (a child's name, birth date, sex, religion — entered by the parent), groups	To keep family memories and milestones	Our storage only. Never public
Payments and orders	Order amounts, reference codes, the payment-proof screenshot, receipt name and TIN	To confirm and receipt purchases	Our storage. **Anthropic** reads the screenshot to check the reference (never approves a payment). No payment gateway is used. **Apple** in-app purchase is built but switched off
Messages and notifications	Chat text and files, in-app notices, support messages	To talk and to tell people what changed	Our storage. **Resend** for e-mail to couples, hosts and suppliers
Published text (story, guest columns)	The text a couple or guest writes	To keep public pages safe	**OpenAI** (moderation) and **LanguageTool**, Germany (spelling)
Pabuya gifts	The couple's GCash / bank handle; a guest's gift note, amount and screenshot	To let guests give and couples say thanks	Our storage. Seen only by the hosts. Setnayan never holds the money
The website itself	Essential cookies only; a daily visit count with a one-day hashed code (no cookie)	To keep people signed in and count visits	No third-party cookie. **Sentry** gets error reports with a masked screen replay

Not used any more: PostHog analytics (removed 22 Oct 2026) · Persona, Veriff, Onfido and AMLC screening (retired 3 Jul 2026) · Contract Intelligence AI (retired 18 May 2026).

Part 2 — Our website's promise

What the live pages tell people, grouped by topic. Short quotes are from the pages; the rest is close paraphrase. Pages: `/privacy` (last updated 22 Oct 2026), `/cookies` (22 Oct 2026), `/privacy/google-access` (9 Aug 2026), `/terms` and `/refunds` (30 Jun 2026), and the Profile screen.

Who we are and how to reach us

- Setnayan is run by SETNAYAN SOFTWARE DEVELOPMENT SERVICE, a DTI-registered sole proprietorship; the owner is the controller and holds the DPO role.

- Data Protection Officer: **dpo@setnayan.com**, for access, correction, blocking, erasure, complaints and NPC questions. "We respond within 15 business days."
- NPC registration "will be filed under this business name".

What we collect, and what we do not

- Account details, event data, chat, payment details and proof screenshots, error reports, and basic request data (IP, browser, time).
- "No product analytics." No advertising IDs, no third-party cookies, no tracking across sites, no location used for ads.
- We do not require a government ID from couples; we do not sell or share event data for others' marketing (Terms).

Cookies

- "Essential cookies only", every cookie is first-party, and "there is no cookie banner". Each cookie is listed by name and lifetime.
- View-count cookies stop the same browser being counted twice; nothing else measures how people use Setnayan.

Photos, face matching and live video

- Location is removed from every photo downloaded or shared; originals stay private.
- Face matching is opt-in, adults 18+ only, one event only, never reused, sold or shared. Withdrawing deletes the face code and selfie.
- A guest can turn on FaceBlock (face blurred on public screens). Guest photos go public only with the guest's opt-in **and** the couple's approval.
- If the host opens the shared pool, other signed-in guests of that event see screened, compressed copies; never across events.
- In live video the two devices learn each other's IP; "We do not store these addresses." "Calls are never recorded."

Suppliers, coordinators and AI

- A supplier sees the couple's event name and date, never their e-mail or personal name unless the couple shares it.
- Other couples may see a count of couples asking about the same date — only if at least three, never who.
- Coordinators see only what the couple grants; money powers are off unless the couple turns them on.
- AI helpers never get the guest list or sensitive data; the receipt reader only types out what it sees and can never approve a payment.
- Anti-fraud checks may hide a listing; a permanent action needs two team members; vendors can object.

How long we keep things

Data	Promise
Full-resolution photos	6 months from the first photo, never less than 3 months after the event
Compressed gallery	Kept online, free, **for life**

Face data	3 months after the event; at once if consent is withdrawn
Couple–supplier messages	5 years after the event
Payments, receipts, contracts	10 years (BIR)
Account	While open, then "a short 30–90 day tail"
Support tickets · error logs · device records	2 years · 90 days · pruned after 24 months unused

Your rights

- Download your data as a file from Profile. Withdraw face consent at any time.
- Delete your account: type DELETE on Profile; the team reviews within 24 hours and erases your personal data, except records the law makes us keep.
- Correct your details on Profile; object through the Help Center.
- Have a supplier's photo of you taken down — including the supplier's own copy and portfolio.

Other companies we use

Named on `/privacy`: Supabase, Vercel, Cloudflare, Resend, Sentry, OpenAI, LanguageTool, OpenStreetMap, Vimeo, Anthropic, Suno, Google (YouTube, Drive, Gemini, address server), TikTok. Google data follows Google's Limited Use rules; no sale, no ads, no AI training.

Terms and refunds

- Accounts are for adults 18+; guests of any age take part under the host's responsibility.
- Prices in pesos, quoted before payment; a receipt for every paid order.
- Full refund if we fail to deliver, the service is defective and cannot be fixed, or you were charged in error; otherwise digital services are final once started.
- Supplier bookings are paid directly to the supplier; Setnayan charges no commission and holds no money.

Part 3 — How we comply

For each promise: the legal basis, the policy that governs it, the mechanism in the product, and its state. **Kept** = the code does what the page says. **Gap** = it does not yet, or the page is silent.

Promise	RA 10173 basis	Policy in the pack	What keeps it in the product	State
Only the right people see a person's data	§ 20 security	Manual § 3.2	Row-Level Security on every table from creation; private files with short-lived links	Kept
DPO reachable, reply in 15 business days	§ 21 accountability; § 16 rights	Manual § 3.1, § 6; Designation A.4	dpo@setnayan.com on every legal page (tested reachable 13 Sep 2026)	Kept
Essential cookies only, no banner	§ 12(f) / § 16 transparency	ROPA DPS-11	PostHog removed; a code test fails the build if an analytics tool returns	Kept

No product analytics	§ 11 proportionality	ROPA DPS-09, DPS-21	No analytics service; first-party visit count with a hash destroyed daily	**Gap** — the visit count is not yet mentioned on `/privacy` or `/cookies`
Face matching: opt-in, 18+, one event	§ 13(a) consent for sensitive data	Manual § 7; DPIA 06	Separate default-off tick; 18+ check; known minors refused; consent stamped	Kept
Face data deleted after the event	§ 11(e) keep no longer than needed	Manual § 5.3; ROPA DPS-04	Selfie erased 12 h after the event; 3-month backstop job	Kept (stricter than the page says)
Withdrawal blurs, photo kept	§ 16 right to object	Manual § 7	Blurred copy used on wall, pool and public page	Kept
Location removed from shares	§ 11 proportionality	ROPA DPS-05	Strip on every download; file dropped if strip fails	Kept
Supplier-photo takedown reaches the supplier's copy	§ 16(e) erasure	ROPA DPS-24	A takedown hides the photo in all four photo tables (tested)	**Gap** — a guest cannot yet file one against a supplier-held photo
Account deletion	§ 16(e) erasure	Manual § 5.5, § 6	Request → review in 24 h → personal fields blanked, business records kept	**Gap** — pages promise a "30–90 day tail" / "30 days" that does not exist; Google/Apple identity copy not yet blanked
Download your data	§ 18 portability; § 16(c) access	Manual § 6	JSON export from Profile	**Gap** — the export leaves out some record types
Keep things only as long as promised	§ 11(e)	Retention Schedule; ROPA	Jobs for chat, face data, supplier uploads, Deep Search, full-res photos, drafts, requests	**Gap** — no job yet for support tickets, error logs, device records
Payments: proof only, AI never decides	§ 12(b) contract	ROPA DPS-08	Manual matching by an admin; AI keeps no transcript	Kept
Other companies named	§ 16(a) right to be informed	Manual § 8.2	A code test fails if a new outside address is not named on `/privacy`	**Gap** — Apple, Turnstile, Instagram sync and push services not yet named; **no data-processing agreement is signed with any company**

Fraud checks are fair	§ 12(f); § 16 rights; IRR § 34 (automated decisions)	DPIA 08	Hide is reversible; permanent action needs two people	Partly — the balancing test and formal appeal path are still owed
Breaches reported within 72 hours	§ 20(f); NPC Circular 16-03	Breach Policy	Two-person team, DPO leads	**Gap** — no breach register yet; `/privacy` does not state the promise; guests have no e-mail channel
Admin access is protected	§ 20 security	Manual § 3.2.3	Password + server role checks	**Gap** — no two-factor sign-in is built
Data stays safe if lost	§ 20 security	Breach Policy § 7.3	—	**Gap** — no database backups (free plan, owner's accepted choice 10 Aug 2026)

Still open before NPC filing (scheduled January 2027)

1. **Sign** the three v1.1 documents: Privacy Manual, DPO Designation + registration sheet, Breach Policy.
2. **Fill** the six owner fields: barangay + ZIP, TIN (at filing only), DPO title, one phone number, DPA status, signature date.
3. **Sign data-processing agreements** with Supabase, Vercel, Cloudflare, Resend, Sentry, Anthropic and OpenAI; decide whether to keep LanguageTool.
4. **The 15 NPC filing tasks** (not started when seeded): counsel review · one filing backbone · single-source conflicts · anti-fraud balancing test and appeal · faith / minors / e-gift / device disclosures · honoree details consent · dependent and e-gift switch state · agreements · remaining impact assessments · device-check balancing test · staff confidentiality notes · signing · filing on the NPC system · retention clean-up · breach register.
5. **Counsel review** of the pack — recommended, not a gate (owner ruling).
6. **Website fixes** listed as gaps above (an engineering job, not part of this pack).
7. **Re-count** data subjects on the day of filing (`/admin/compliance/data-sheet`); the last count (17 Aug 2026) was 48 people and 0 face codes.
